

# Intern Task: eCourts Scraper

**\*\*Goal:\*\*** Build a Python script to fetch court listings from [eCourts](https://services.ecourts.gov.in/ecourtindia\_v6/).

## **Requirements**

1. Input case details (CNR or Case Type, Number, Year).
2. Check if the case is **\*\*listed today or tomorrow\*\***.
3. If listed, show its **\*\*serial number\*\*** and **\*\*court name\*\***.
4. Optionally, **\*\*download the case PDF\*\*** (if available).
5. **\*\*Download entire cause list for today\*\*** on request.

## **Output**

- Show info on console.
- Save results (and cause list) as JSON or text files.

## **Bonus**

- CLI options (e.g., `--today`, `--tomorrow`, `--causelist`).
- Optional simple web/API interface.

## **Submission**

- Submit via GitHub or ZIP with a README explaining setup & usage.
- **\*\*Deadline:\*\*** 20th October.

## **Evaluation**

- Accuracy & completeness
- Code quality & clarity
- Proper handling of errors
